Patrick S.P. Wang's Brief Vitae

Patrick S.P. Wang, *Fellow of IAPR, ISIBM and WASE*, is a professor of Computer and Information Science at Northeastern University, USA, Shanghai East China Normal University Zi-Jiang Visiting Chair Professor, research consultant at MIT Sloan School, and adjunct faculty of computer science at Harvard University. He received PhD in C.S. from Oregon State University, M.S. in I.C.S. from Georgia Institute of Technology, M.S.E.E. from Taiwan University (Taipei) and B.S.E.E. from Chiao Tung University (Hsin-chu).

As *IEEE* and *ISIBM Distinguished Achievement Awardee*, Dr. Wang was on the faculty at University of Oregon and Boston University, and senior researcher at Southern Bell, GTE Labs and Wang Labs prior to his present position. Dr. Wang was Otto-Von-Guericke Distinguished Guest Professor of Magdeburg University, Germany, and iCORE (Informatics Circle of Research Excellence) visiting professor of University of Calgary, Canada, Honorary Advisor Professor for China's Sichuan University, Xiamen University, and Guangxi Normal University. In addition to his research experience at MIT AI Lab, Dr. Wang has been a visiting professor and invited to give lectures, do research and present papers in a number of countries and areas, from Europe, Asia and many universities and industries in the U.S.A. and Canada. Dr. Wang has published over 160 technical papers and 26 books on Pattern Recognition, A.I. Biometrics and Imaging Technologies and has 3 OCR patents by US and Europe Patent Bureaus. One of his books is so important and widely cited that the USA Department of Homeland Security(DHS) uses it as reference for Call For Proposals 2010. For details please refer to DHS website: Image Pattern Recognition—Synthesis and Analysis of Biometrics (WSP): <https://www.sbir.dhs.gov/PastSolicitationDownload.asp#101005>.

As IEEE senior member, he has organized numerous international conferences and workshops including *conference co-chair of the 18th IAPR ICPR* (International Conference on Pattern Recognition) in 2006, Hong Kong, China, and served as reviewer for many journals and NSF grant proposals. Professor Wang is currently *founding Editor-in-Chief of IJPRAI* (Int. J. of Pattern Recognition and A.I.), and *Machine Perception and Artificial Intelligence Book Series* by World Scientific Publishing Co. and Imperial College Press, London, UK, and elected chair of IAPR-SSPR (Int. Assoc. for P.R.). Dr. Wang has been invited to give talks in many International Conferences including AIA2007, Innsbruck, Austria; IAS2007, Manchester, UK; IEEE-SMC2007, 2009, 2010, Montreal, San Antonio, Istanbul, respectively; World-Comp2010, Las Vegas, USA; CIS2007, Harbin, China, eForensics2008, Ade-

laide, Australia; ISI2008, Taipei, Taiwan, China; BroadCom2008, Pretoria, South Africa; VISAPP2009, Lisboa, Portugal; UKSim2011, Cambridge, UK, and IADIS2010, 2011, Freiburg, Germany, and Roma, Italy, respectively. Dr. Wang received IEEE Distinguished Achievement Award at IEEE-BIBE2007 at Harvard Medical, for Outstanding Contributions in Bioinformatics and Bioengineering.

In addition to his technical achievements and contributions, Professor Wang has been also very active in community services, and has written several articles on Du Fu, Li Bai's poems; Verdi, Puccini, Bizet, and Wagner's operas; and Mozart, Beethoven, Schubert and Tchaikovsky's symphonies. A collection of selected proses was published in his book *Harvard Meditation Melody* by Jian-Shing Pub. Co., Taipei, which won best publication award by Taiwan, China.

Lotfi A. Zadeh (left) and Patrick S.P. Wang (right)

Dear Patrick,

Many thanks for your message and the kind words.

I appreciate very much what you wrote. As you know, I am highly impressed by your achievements. With regard to the foreword, I have a problem. After my heart attack in December 2008 my vision and my hearing have experienced a decline. Today, to read printed matter I have to use a magnifying glass. Reading messages does not present a problem but reading a book does. This is why writing a foreword — even to a book dedicated to my admired friend, K.S.Fu, would be stressful. It is a source of great regret for me not to be able to respond affirmatively to your invitation. Please keep in touch.

With my warm regards.

Sincerely,

Lotfi

In Honor and Memory of Late Professor King-Sun Fu

The late Professor King-Sun Fu is one of the founding fathers of pattern recognition, who, with visionary insight, founded the International Association for Pattern Recognition around 1980. In the almost 30 years since then, the world has witnessed the rapid growth and development of this field.

Dear Dr. Wang:

The enclosed manuscript has been submitted for possible publication in the IEEE Transactions on Pattern Analysis and Machine Intelligence. I should greatly appreciate it if you or one of your associates would review the manuscript for the Transactions. The paper is entitled: PAMI 81-8-5R, FUZZY TREE AUTOMATA AND SYNTACTIC PATTERN RECOGNITION.

For your convenience, I enclose our standard referee form. Thank you very much for your assistance. This paper is for your re-review.

Sincerely,

K. S. Fu

PURDUE UNIVERSITY SCHOOL OF ELECTRICAL ENGINEERING

24 January 1980

Professor Patrick S. P. Wang
Department of Computer Science
University of Oregon
Eugene, OR 97403

Dear Patrick:

Thank you for your letter dated January 15, 1980. The following is my schedule to Eugene:

February 22, San Francisco - Eugene
8:25 a.m. 9:46 a.m. (UA 862)

February 23, Eugene - San Francisco
1:45 p.m. 2:55 p.m. (RM737)

The title of my talk is: "Recent Developments In Syntactic Pattern Recognition." I will need an overhead projector and a 35mm slide projector for my talk.

Looking forward to seeing you in February.

Sincerely,

K. S. Fu
K. S. Fu

PURDUE UNIVERSITY SCHOOL OF ELECTRICAL ENGINEERING

January 19, 1981

Dear Dr. Wang:

We have proposed a NSF Workshop on Structural and Syntactic Pattern Recognition, which will be held on June 22-24, 1981, in Saratoga Springs, N.Y. General Electric is also a co-sponsor of the workshop. The purpose of this workshop is to assess the progress in structural and syntactic pattern recognition in terms of its contributions and limitations to practical applications and to project the future directions of this area. Knowing your interest and past contributions in this area, we would like to invite you to participate in this workshop. Your traveling expenses will be paid by the workshop pending the final approval of our proposal by NSF.†

The major emphasis of the workshop is on group discussions rather than many formal presentations of papers. We are planning to have a series of background papers and a small number of short presentations on new research results and applications. Please do not hesitate to let me know if you would like to give a paper at the workshop.

We hope that you will accept our invitation and we are looking forward to seeing you at the workshop.

Sincerely,

K.S. Fu

Professor of Engineering on behalf of the Workshop Organizing Committee K.S. Fu (Co-Chairman) T. Pavlidis (Co-Chairman) J. L. Mundy R. K. Aggarwal

† NSF rule may not allow us to pay participants from industry.

Please return this form to K. S. Fu before February 15, 1981.

I will - accept the invitation to participate in the NSF Workshop on Structural and Syntactic Pattern Recognition (June 22-24).

I will not - I would like to present a paper with title: Please send an abstract if possible.)

敬爱的傅大嫂：您好：

就是王中法，傅教授生前好友，现在 Nonkonsten 及 Harvard 任教。为了捧场傅教授生前志向，我在一群中外朋友发起创办了一个新的刊物叫做《学报》"A Semantical Journal of Pattern Recognition and Artificial Intelligence" (IJPRAI) 国际模式识别和人工智能学报"。创刊早将於1987年春季(傅教授逝世二周年纪念)刊出，并将献给傅教授。鞠正了科技性的文章外，我将着手写一篇纪念文。不吝可否，麻烦支持两件事：

- (1). 请提供一篇傅教授生前生活照(如空或被照，均可)
- (2). 我写的纪念文主要是就傅教授生前以文章往着重在科技研究心得字体的给读。可否请这些篇幅纪念文(懂英文)从这些观者来看? 长短形制不拘，傅教授是位很有成就，有深远影响力，是深受广大学术界所尊敬，相信您的文章一定会给大伙带来很大的启发，尤其是在教授逝世二周年纪念刊上登载，更是具有极其珍贵的意义，不吝赐教意见如何？

在忙百忙之中，冒昧打扰您，实在过意不去。我如谨代表所有 IJPRAI 的编辑委员会(包括 A. Roomfelli, H. Freeman, H. Bunker, T. Sjolander, J. Tan, S.K. Chang, C.H. Chen, Y.T. Chien 等)向您致以十分衷心的感谢，并希望将来能帮助我们这忙，但升升，藉藉同心，愿的议者享受其惠。

傅大嫂 敬

时祺

傅大嫂 敬 12/88

傅大嫂：

您好：

贵刊之《人工海報》，MIT 中國

工程師為《海報》及《邊際》。

非常珍貴也。

旅館已訂好 Sonesta Hotel, 在

5 Cambridge Park, Cam. 三月 25 26 兩晚 (Guarantee late payment) 25 日下午 5:05 或會準時在機場

等候。再海報。

傅大嫂 敬

Foreword By J.K. Aggarwal

It is again a pleasure and an honor to introduce this collection of papers in memory of the late Professor King-Sun Fu. Professor Fu contributed significantly to the growth of pattern recognition through teaching, research, scholarship and supervision of Ph.D. students at Purdue University. It is sad that Professor Fu did not live to see the spectacular growth that we are witnessing today in the use of pattern recognition and computer vision in industry, military, and daily products. Professors Tzay Young and King-Sun Fu published a collection of papers entitled Handbook of Pattern Recognition and Image Processing. The book was published in 1986 after Professor Fu passed away in 1985.

Professor Patrick S.P. Wang has followed in the spirit of the collection published by Young and Fu.

The present book is fifth in the series published by Professor Patrick S.P. Wang and his co-editors. The earlier four collections are:

- (i) Handbook of Pattern Recognition and Computer Vision
Editors: C.H. Chen, L.F. Pau and P.S.P. Wang
1993, World Scientific Publishing
32 papers, 984 pages
- (ii) Handbook of Pattern Recognition and Computer Vision
Editors: C.H. Chen, L.F. Pau and P.S.P. Wang
1999, World Scientific Publishing
34 papers, 1019 pages
- (iii) Handbook of Pattern Recognition and Computer Vision
Editors: C.H. Chen and P.S.P. Wang
2005, World Scientific Publishing
33 papers, 639 pages
- (iv) Pattern Recognition and Computer Vision
Editor: P.S.P. Wang
2010, River Publishers
28 papers, 451 pages

The present volume again honors the contributions of Professor Fu. He was the founding editor of the IEEE Transaction on Pattern Analysis and Machine Intelligence. Today this transaction has the highest regard of researchers and developers. It is among the crown jewels of the publications of the IEEE. He also helped start the organization known as the International Association for Pattern Recognition (IAPR) in the early 1970s. Today IAPR has membership from 42 countries all over the globe. The family and friends of Professor Fu created the King-Sun Fu Prize in his memory under the auspices of the IAPR. IAPR awards this prize every two years at its International Conference on Pattern Recognition popularly known as ICPR. It is noteworthy that seven winners of the King-Sun Fu Prize (out of a total of

11 awarded so far) are among the authors in the book edited by Professors Young and Fu.

The present book consists of 30 papers clustered in five broad chapters. It consists of original contributions from a few coupled disciplines, including pattern recognition, machine intelligence, computer vision, image processing, and signal processing. Authors review existing methodologies, propose new approaches, and build systems on fairly diversified applications including face recognition, activity recognition, and biometric authentication. The book will appeal to researchers, students, and technologists.

It is a pleasure to be part of the tribute to Professor King-Sun Fu.

J.K. Aggarwal
Cullen Trust Professor
Department of Electrical and Computer Engineering
The University of Texas at Austin
May 2011

Foreword By Brian C. Lovell

This is the second in a series of books on pattern recognition to honour the memory of Professor King-Sun Fu. No one deserves more credit for the founding of the International Association for Pattern Recognition than King-Sun Fu. In 1971, King-Sun Fu invited several leading researchers to set up a committee for an international conference on pattern recognition¹. This led directly to the First International Joint Conference on Pattern Recognition (IJCPR) which was held in Washington, D.C., from 30th October to 1st November, 1973. Discussions at the Lyngby IJCPR in 1974 recommended the formation of an entirely new international society which would be a kind of federation of national organizations in pattern recognition. The name of the organization would be “The International Association for Pattern Recognition” as suggested by Herbert Freeman.

The IAPR came into official existence in January, 1978 with King-Sun Fu as the inaugural President. Today the IAPR has 43 member organisations from all around the globe. It sponsors numerous pattern recognition conferences in many countries as well as organising the International Conference on Pattern Recognition (formerly IJCPR) conference series.

Thus it was a tremendous blow when King-Sun Fu died suddenly on 29 April 1985 aged just 55. His untimely death was a loss to the whole community and was keenly felt by his family, friends, students, and his IAPR colleagues. He, more than anyone, created the organization, serving as its inaugural president, and was a leading figure in the field of Pattern Recognition. In 1988 the IAPR awarded the first K.S. Fu Prize to commemorate his achievements. The prize was to be given no more often than biennially to a living person “in recognition of a technical contribution of far-reaching significance and impact on the field of pattern recognition or its closely allied fields made at any time in the past.” The K.S. Fu prize serves as the “Nobel Prize” for pattern recognition.

It is appropriate to commemorate King-Sun Fu’s achievements with this second edition of collected works representing emerging aspects of the exciting field of pattern recognition which he did so much to establish. These chapters cover diverse topics ranging from biometrics to image forensics and data mining. They give an insight into just how much the field of pattern recognition has advanced since the foundational works of King-Sun Fu in the 1970s.

Brian C. Lovell
President of the IAPR, 2008–2010
May 2011

¹ Freeman, H., Detailed History of the IAPR, <http://www.iapr.org/docs/IAPR-History.pdf>, [last visited: March 2011]

Foreword By Sargur N. Srihari

My memories of King-Sun Fu date from the early 1970's when I was a graduate student beginning my studies in pattern recognition. At that time Fu's work at Purdue University was very influential for anyone interested in entering the field.

Fu was synonymous with a new area of pattern recognition called *syntactic pattern recognition*¹. Statistical pattern recognition was already an established field with the appearance of the pre-print of Duda and Hart's textbook in 1972². Syntactic pattern recognition was an alternative approach to recognizing visual patterns, such as handwritten characters, based on formal grammars. Fu was a vigorous advocate of the syntactic approach as an alternative to purely statistical models. The goal was to exploit knowledge of structure in designing pattern recognition algorithms. There existed a small body of work such as that of R. Narasimhan at the University of Illinois who proposed a full set of grammatical rules for the English alphabet³. Others included R. A. Kirsch of the National Bureau of Standards who proposed rules for shapes⁴ and A. Joshi of the University of Pennsylvania who suggested tree grammars⁵. While Fu and Narasimhan, who both did their graduate work at the University of Illinois-Urbana/Champaign, were interested in syntactic pattern recognition, Fu took it to the next stage by proposing the use of probabilities with grammatical rules. The explanatory powers associated with such methods were attractive to the field of Artificial Intelligence which was just beginning to take off. Today pattern recognition and the associated field of machine learning have enormous applications in every field. It is quite common to see both syntactic and statistical pattern recognition being used in the same system, e.g., domain-specific rules written by linguists and maximum entropy Markov models are both used in a single commercially available information extraction system⁶.

Fu also made important contributions to an area he named as *sequential pattern recognition*⁷. The goal here was to build pattern recognition algorithms which could take features as input one at a time and stop when a sufficient level of confidence was reached. He adapted Abraham Wald's se-

quential probability ratio test, known primarily to statisticians, and brought it to the attention of the pattern recognition community. Today sequential models have developed much further and are at the heart of machine learning methods such as hidden Markov models, conditional random fields and linear dynamical systems.

Arguably, the biggest legacy of Fu was the establishment of the *IEEE Transactions on Pattern Analysis and Machine Intelligence* (IEEE-TPAMI) which began publication in 1981. It was an almost single-handed effort to build a community of researchers. Previously papers on pattern recognition would go to *IEEE Transactions on Computers* (IEEE-TC) which was dominated by digital circuits research. In fact the first I heard about IEEE-TPAMI was after I had submitted a paper to IEEE-TC, I received a call from King-Sun Fu asking whether it would be appropriate to transfer it to the newly established IEEE-TPAMI. I readily agreed and was pleased to have had a paper in the first issue of IEEE-TPAMI⁸.

It was not surprising that Fu chose to use the phrase *Pattern Analysis* since that reflected both statistical methods and grammatical rules. The term *Machine Intelligence* reflected the inclusion of Artificial Intelligence (AI). At that time AI was thought of as consisting of algorithms based on logic, heuristics and expert rules. The phrase “machine intelligence” was less used but it had been the title of an influential series of volumes emerging from Edinburgh University⁹. The term “machine” avoided negative connotations of artificial intelligence such as whether natural intelligence was superior to artificial intelligence. Today IEEE-PAMI is the pre-eminent transactions of the IEEE. It has the highest impact factor of all Artificial Intelligence journals. Perhaps IEEE-PAMI itself is a tribute to King-Sun Fu’s foresight.

Finally I had two other interactions with King-Sun Fu. As a graduate student I wrote to him about some fine points in the sequential models he espoused. I received a prompt response from him clarifying it and sending me a helpful pre-print. My only occasion to meet him in person was at a *Computer Vision and Pattern Recognition (CVPR)* conference in Chicago in 1979.

The present volume reflects many of the same themes and applications that were foreseen by King-Sun Fu in the early days of syntactic pattern recognition, sequential models and the pre-eminent journal that he founded.

Preface

In our time of rapidly changing Information Technology (IT) age, there is growing interest in Pattern Recognition and Machine Intelligence and its applications to Biometrics in academia and industries. Novel theories have been found, with new design of technology and systems, in hardware, software and mid-ware. They are extensively studied and widely used to our daily life to solve realistic problems, including science, engineering, agriculture, e-commerce, education, robotics, government, hospital, games and animation, medical imaging analysis and diagnosis, military, personal identification and verifications, and homeland security. The foundation of all these can be traced back to late Professor King-Sun Fu (10/2/1930—4/29/1985), one of the fathers of Pattern Recognition, who was visionary and founded the International Association for Pattern Recognition (IAPR) in 1978. Ever since then, after 33 years, the world has eye witnessed the rapid growth and development of this field, and most people can sense and be touched by its applications in our daily lives.

Today at the eve of his 81th birthday and 26th anniversary of unfortunate and untimely passing of Prof. Fu, we are proud to produce this volume of collected works by the world renowned professionals and experts in Pattern Recognition, Machine Intelligence, and Biometrics (PRMIB) in honor and memory of the late Professor King-Sun Fu. We hope this book will help promote further its course of not only fundamental principles, systems and technologies, but also its vast applications to help solving our daily life problems.

There have been tons of complimentary remarks and praises about Professor Fu's extraordinary achievements on PRMIB, including hundreds of paper and book publications, numerous prestigious awards, founder of IEEE-PAMI and IAPR and an NSF Research centers and so on. Professor Fu is known as one of the greatest computer scientists and engineers. But actually more than that, he is also a great artist and music lover. He believes liberal arts education, and plays volleyball well. In his Lab at Purdue University, most, if not all his team, researchers and students' popular entertainment or exercise is to play volleyball. He also enjoys reading novels and poems. I remember when he came to Boston to give a seminar, we had some discussions on his most recent work then, on "towards a unification theory of statistical and syntactic pattern recognition". He noticed on my desk that there was a paper clip of my article "On Puccini's opera 'Turandot' and Chinese folk song 'Jasmine flower' ". It immediately attracted his attention and interest to request a copy. Everywhere we met or communicated in USA, Canada, Europe or Asia, he always showed strong concerns on not only progress of pattern recognition, but also world affairs, humanity and environment. Although, regrettably, he
